

BAŞKENT ÜNİVERSİTESİ

PROJECT PETLIYST

Onur Uygur Küçük

Problem Domain

Modern veterinary clinics deal with complex operations like managing pet records, scheduling appointments, handling treatment and diagnosis histories, and coordinating communication between pet owners and veterinarians. Many small to mid-sized clinics still rely on manual or partially digital systems, leading to inefficiencies, errors, and poor customer service.

Data Requirements

Enable clinics to store and access pet medical records.

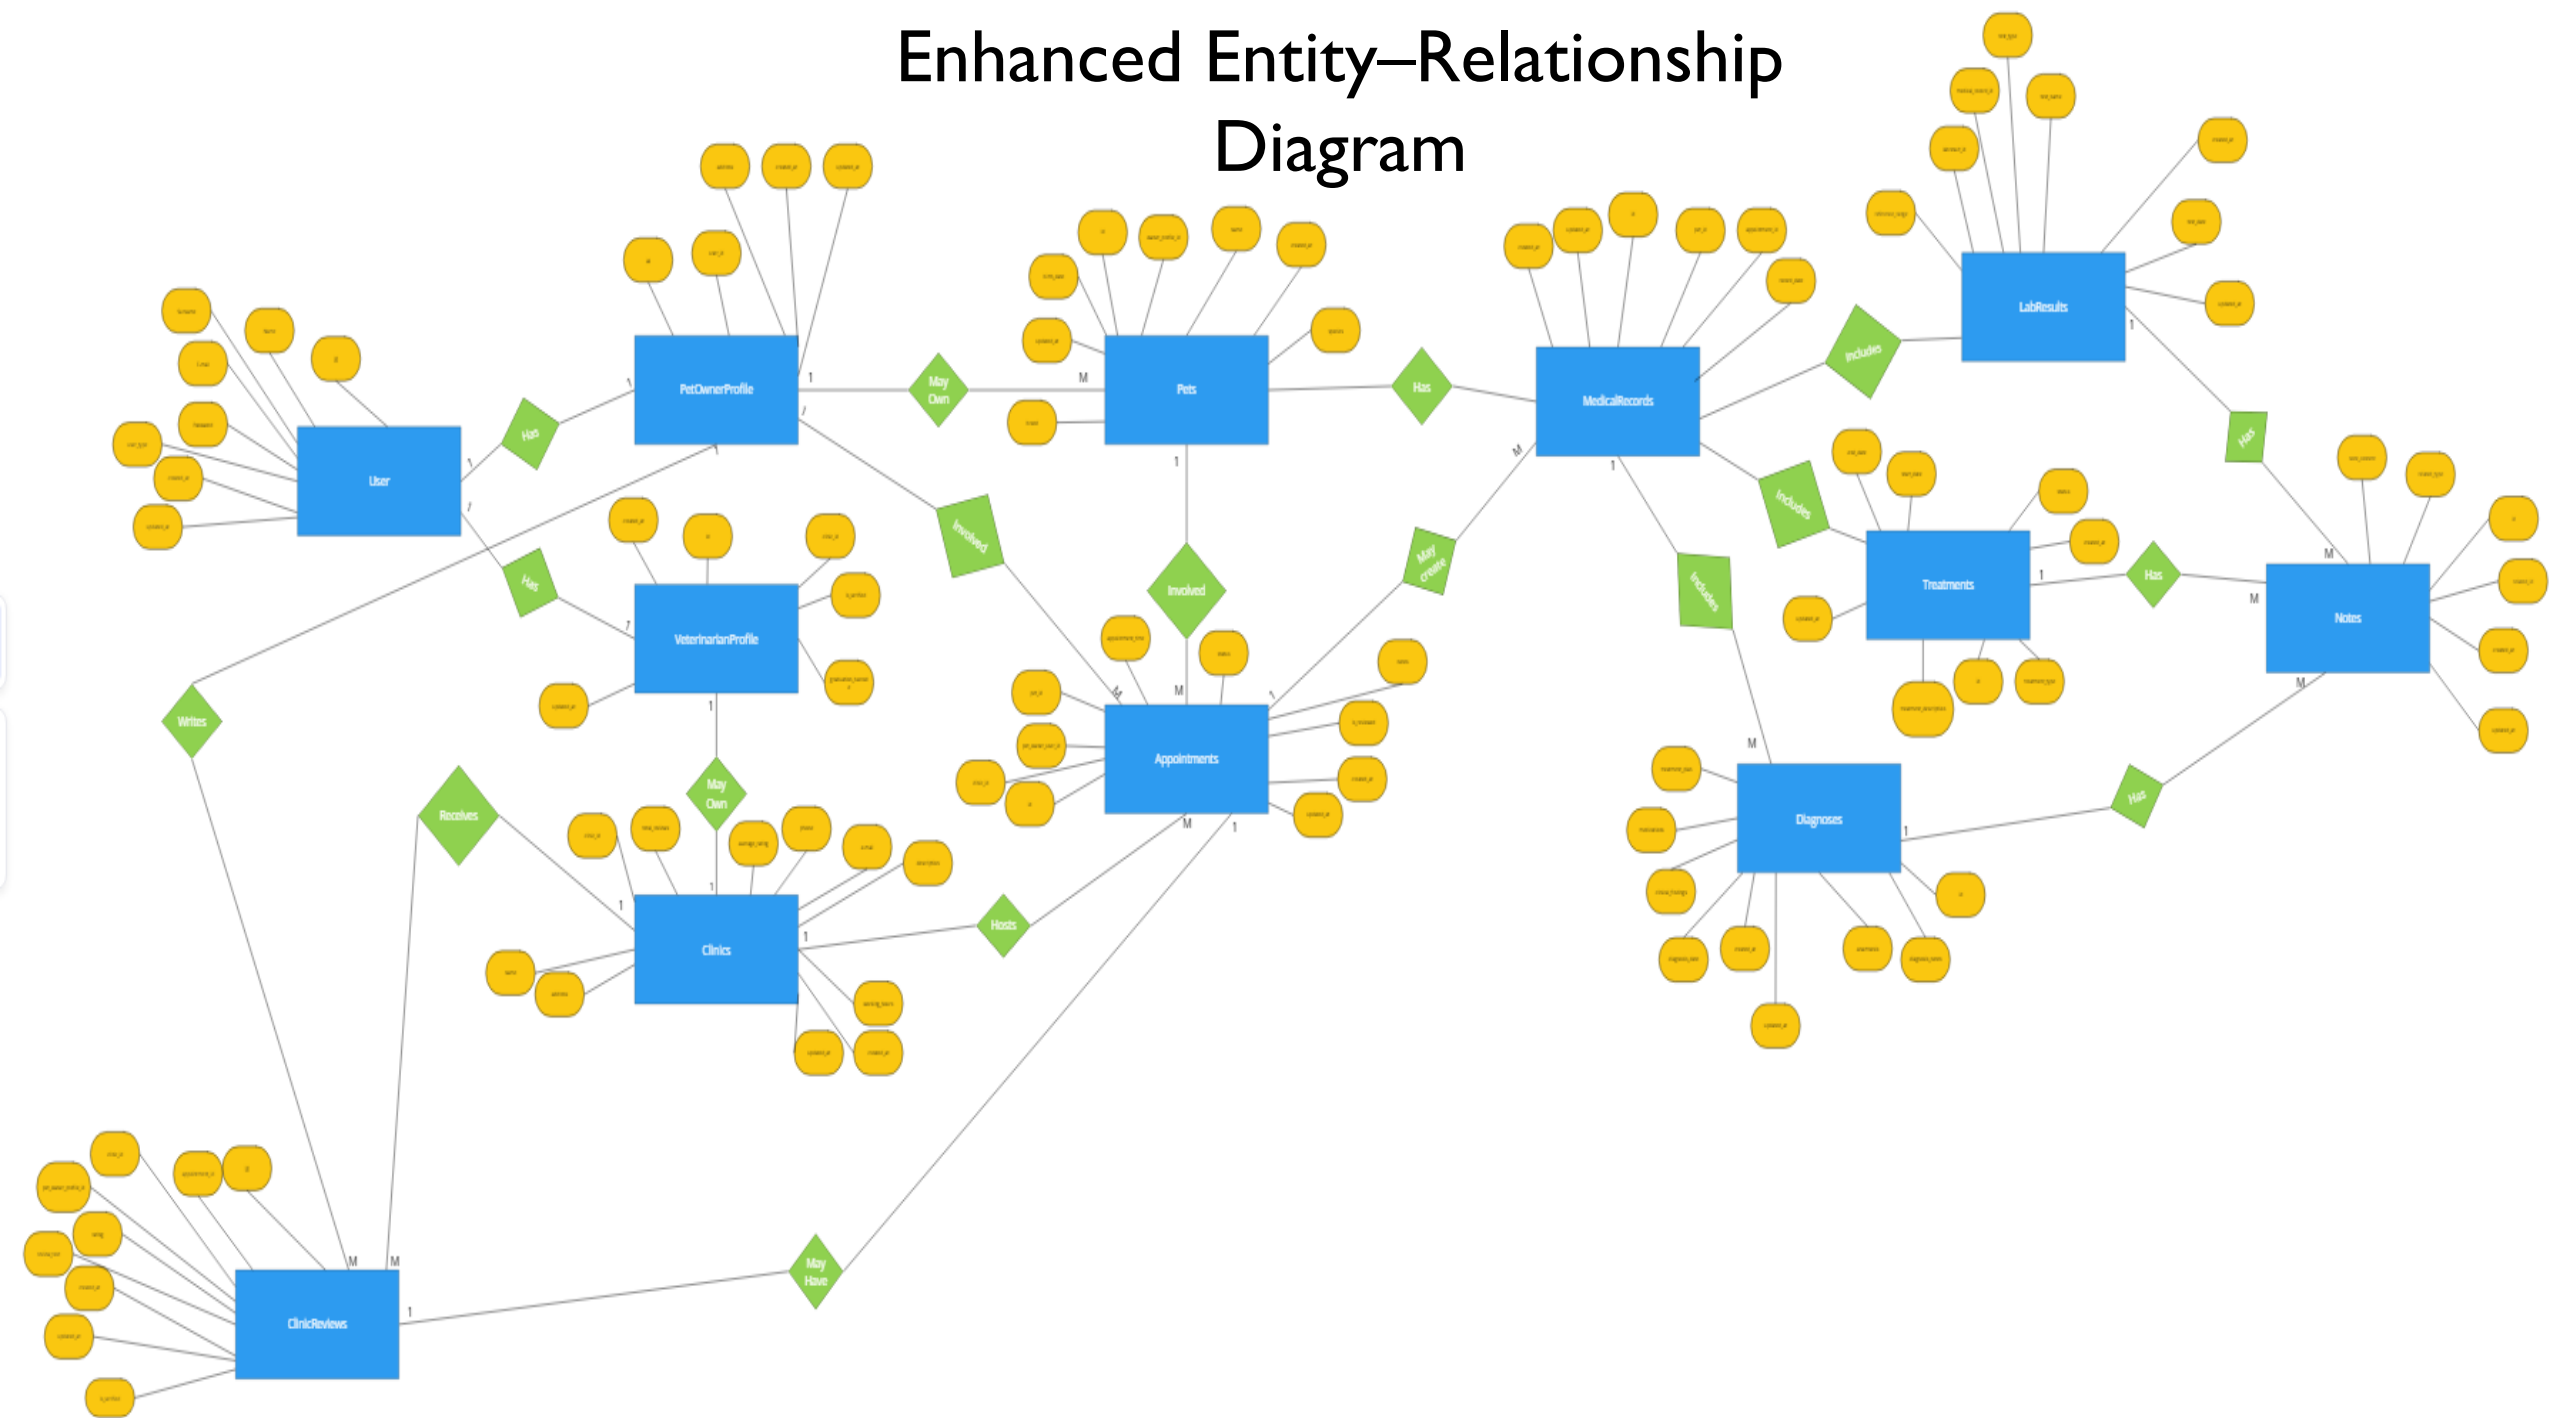

Allow pet owners to book and manage appointments.

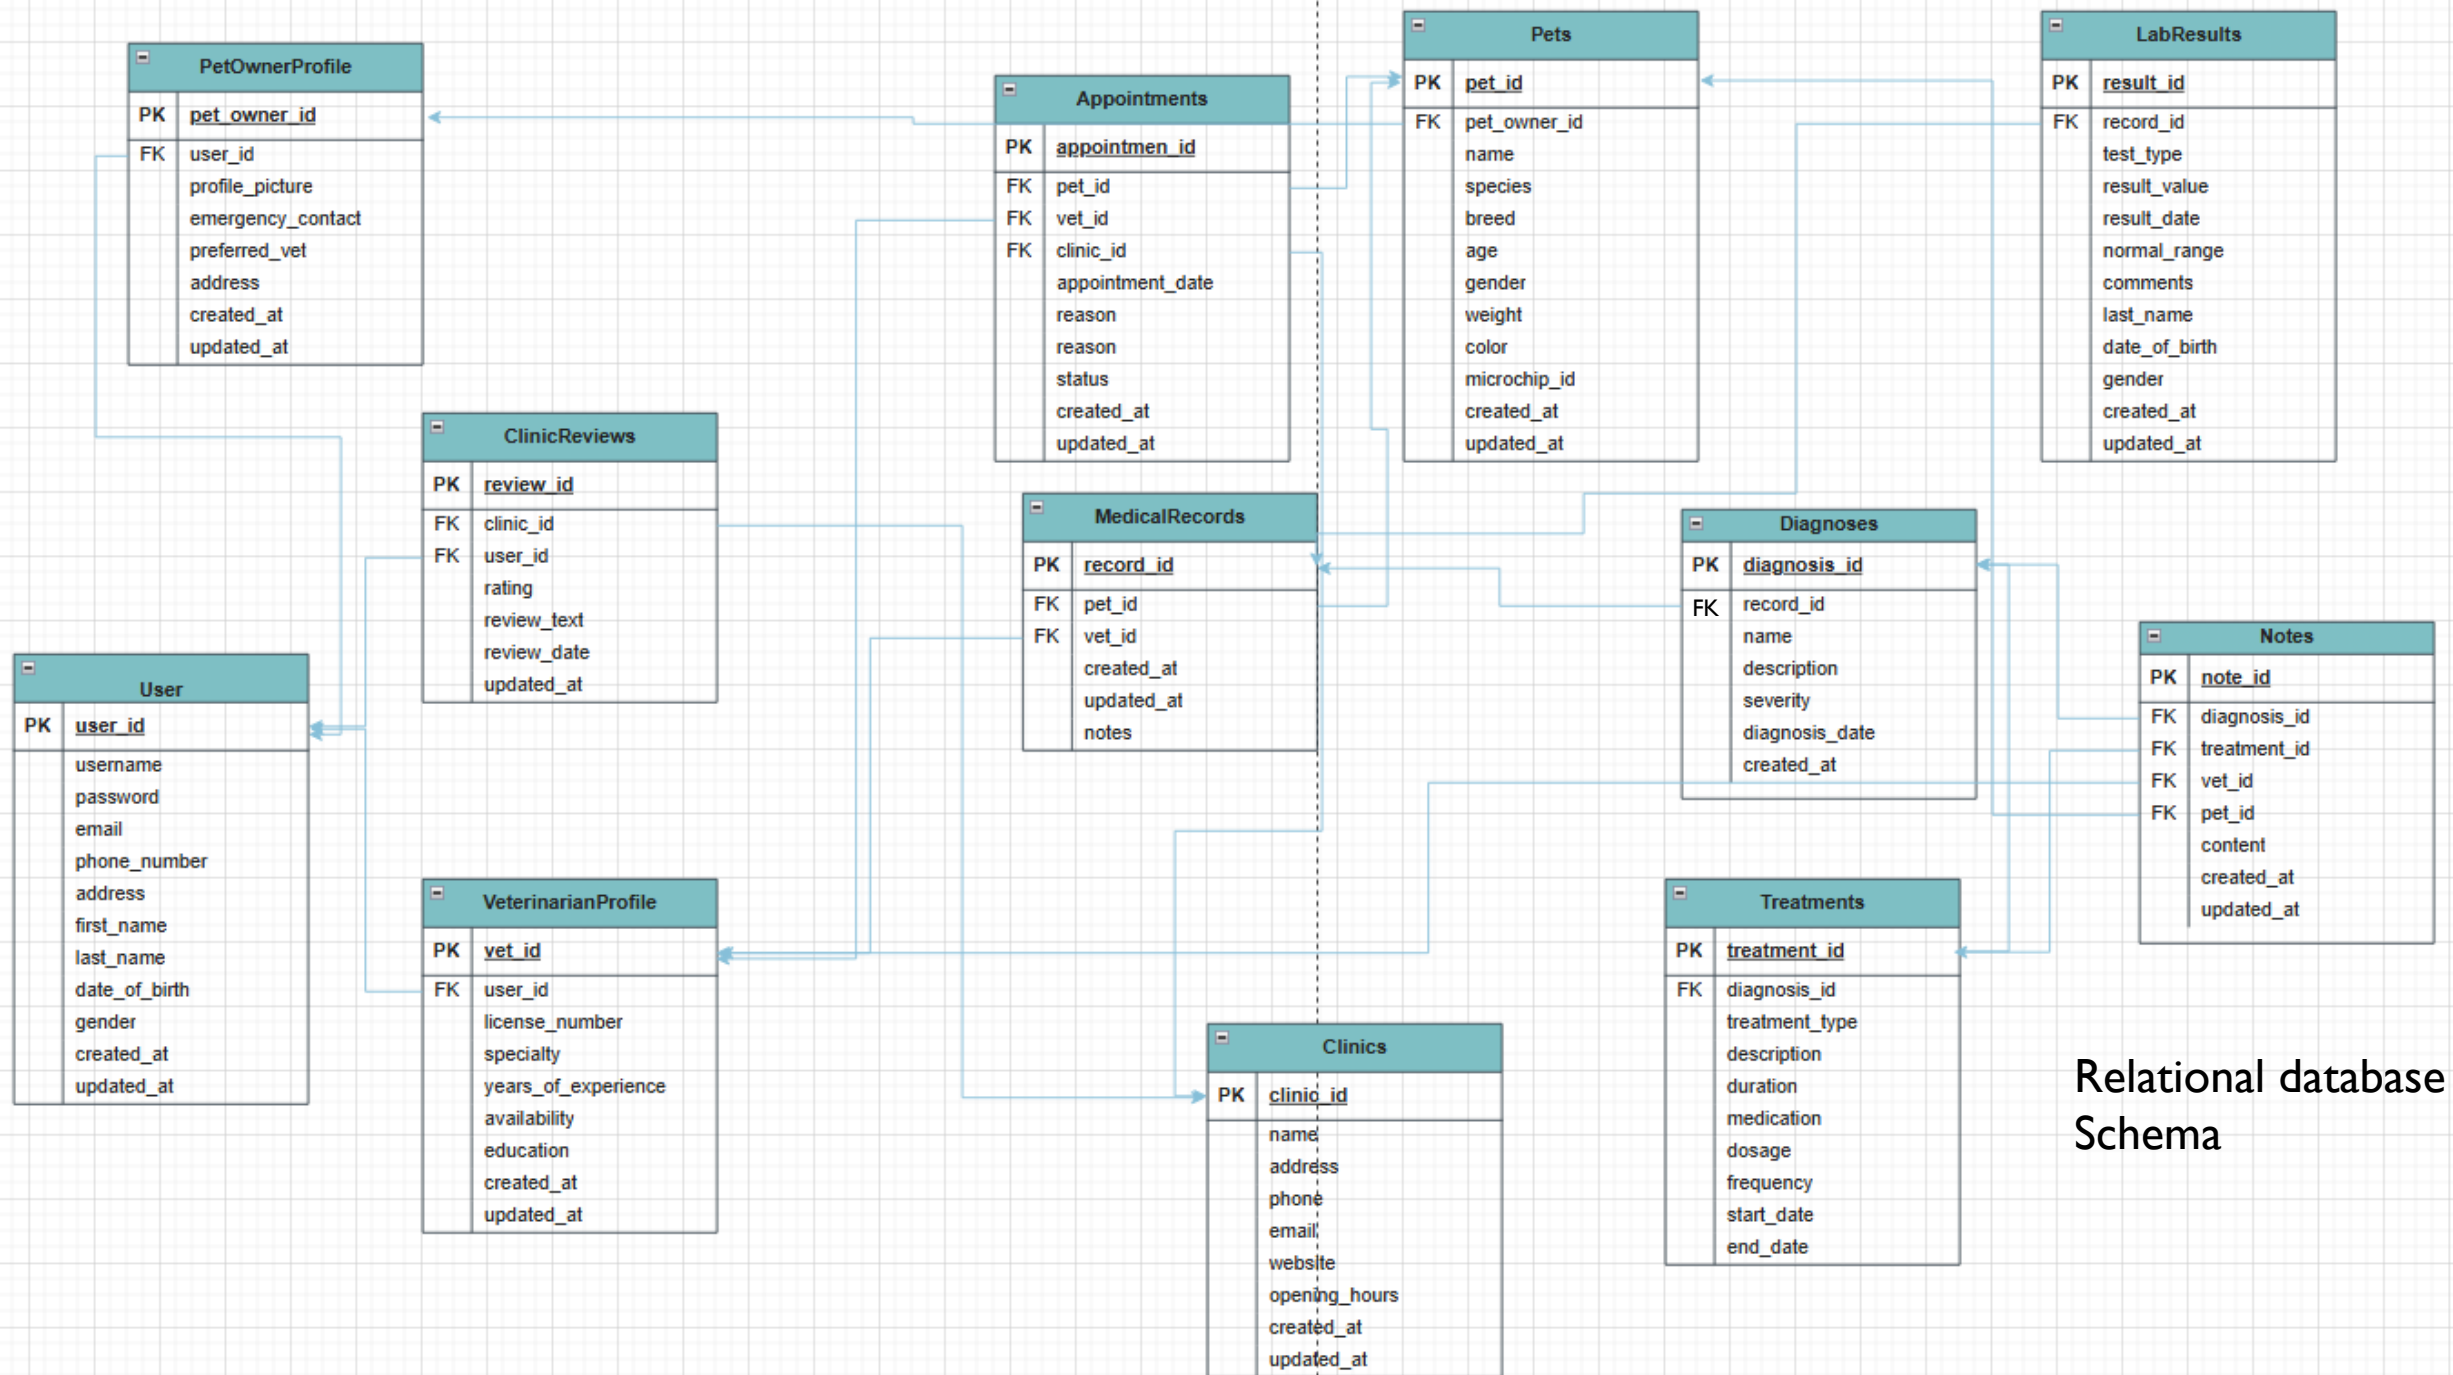

Support veterinarians in diagnosing, prescribing and documenting treatments.

Facilitate communication through notes and record sharing.

Enable reviews for clinics by pet owners for transparency.

Enhanced Entity–Relationship Diagram
